

Just for fun, here is a mock schedule:

1Fall: 101

1Spring: 102 / 145

2F: 203 / 224

2S: 241 / 245

3F: 240 / 366

4S: 334 / 365

4F: 331

Honestly though, everything between 2F and 4S here is pretty much just what you want. I picked probably the most common courses/ordering to take but there's a good amount of flexibility. You can throw the required math class in whenever you feel comfortable. In general, the ones set in stone here are doing 101/102/145 first and doing 331/334 close to last.

I think it's important to emphasize that there is no real "recommended sequence". Beyond the required courses, your advisor would harp on taking the classes you are interested in. I think it's pretty uncommon for two kids to graduate with the exact same CS courses under their belts.
